| Feb 2022 — July 2023  | <b>Data engineer, Sciplay</b><br>Tel Aviv<br>-Achieved cost savings and informed financial decisions by leading a data pipeline development project on AWS Cloud. Utilized Pyspark in Databricks to establish a streamlined data flow into a centralized data warehouse in Snowflake.<br>-Enabled cross-functional teams by providing AWS Cloud solutions through Terraform-based Databricks infrastructure deployment. This involved creating resources and real-time testing environments to support internal teams.<br>-Significantly improved scalability, reduced costs, and enhanced data accessibility by contributing to a successful data migration project. The project involved transferring a legacy on-premises data infrastructure.<br>-Enhanced data accessibility and quality by 50% by designing and developing data ingestion, including ETL processes to acquire structured and unstructured data from diverse sources, such as APIs, databases, and log files. Utilized technologies like Spark and Apache Airflow to feed data into a centralized data warehouse. |
| July 2019 — July 2020 | <b>Intern Data engineer, Paypal</b><br>Tel Aviv<br>-Led a data migration project initiative involving the seamless transfer of semi-structured data from legacy systems into a production environment leading for improving financial decisions for the company. executed on Linux using Hadoop and clusters to ensure the scalability and efficiency of data processing. execution of a Python-based script using PySpark.<br>-Contributed valuable technical insights to enhance data integration across platforms, fostering a more streamlined and cohesive data environment.<br>-Designed and implemented data pipelines in Python, enabling the integration and transformation of data from diverse sources and platforms. This led to improved data quality and accessibility for internal teams.<br>-Optimized data transfers to Enterprise Data Warehouses (EDW) and ETL servers, collaborating with databases such as Teradata, Oracle, and Hadoop to enhance data retrieval and processing efficiency by 30%.                                                               |
| Nov 2017 — July 2018  | <b>Academic tutor, Haifa University</b><br>Haifa<br>Successfully enhanced the academic performance of freshman information systems students at Haifa University by providing comprehensive tutoring in mathematics and programming courses, as appointed by the dean                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
