

Siddiqui Mohammed
ER@o2inc.net
949 379 3951

PROFESSIONAL SUMMARY

- DevOps / Application / Production Support Engineer with 10+ Years of experience in the Information Technology Industry including 5 years of DevOps experience.
- Expertise in the areas of Finance, Telecommunication, Travel and Banking.
- Strong experience in handling the **ETL** jobs using Autosys iXp, Visual Cron, Microsoft SQL server.
- Have worked in the onsite/offshore model with **24x7 Support** that included hand shake / hand off daily call for all requests/issues/task/user/business management and requests.
- Have good experience with application support which involve supporting Production, Development and Non-Production environments.
- Have good experience with the ETL jobs militance and troubleshooting which includes running ETL batch jobs in Dev environment for testing; worked bad data; duplicate data and format issues.
- Have good experience in analysis event logs, ETL task logs and application logs. Involves taking heap dumps and running memory analyzer as required.
- Good experience with managing and resolving adhoc production and application support issues. This involves raising incidents, involving different teams, communicating to users and management, running bridge calls as required.
- Process oriented and making rite checks at each level. This involves working with Development team for enhancements and new patch, making sure the patch (release) is applied in non-prod environments, tested by end users and approved by all stake holders before it is applied in production.
- Good experience in user communication which involves setting **SLA** expectations.
- Involved with the deployment of dev packagers which includes **Ear/War/Jar/Rar/Msi** in windows and Linux servers.
- Good Knowledge of Amazon AWS Cloud Services, (AMI Creation, CLI, API, ALBs, ASGs, Cloud Formation, NewRelic, Route53, Cloud Watch, VPC, EC2, Redshift, S3, ELB, AutoScalingGroups(ASG), EBS, RDS, IAM
- Experience with event-driven and scheduled AWS Lambda functions to trigger various AWS resources.
- Configuration and Build/Release Management **Maven, Chef, Puppet, Jenkins, Ansible, Terraform, Docker, Kubernetes, Splunk, JSON, OpenStack, Ant, Azure ,Maven, GIT, SVN.**
- Experience in **CI** and **CD** on various platforms. Experience in continuous integration technologies **Bamboo** and **Jenkins**.
- Experienced in **branching, tagging** and maintaining the version across the environments using **SCM tools** like **GIT, Subversion (SVN)** on Linux and windows platforms.
- Performed **root cause analysis** and implemented change to mitigate a similar issues occurrence in future as required while proving work around to users.
- Responsible to communicate, resolve and acknowledge Applications issues within pre-defined Service Level Agreements (SLA).
- Responsible to work closely with development team and raise tickets for code fix while providing work around to users and making sure there is proper communication across teams and users as required.
- Experience in exploring PL SQL store procedures ,analyzing them in order to meet users requirment of reporting and data delivery.
- Responsible for creating and maintained documentation for various applications including standard issues, architecture diagrams, environment details and functional details in standard procedures and confluence.

- Excellent problem-solving skills with a strong technical background as well as good communication and interpersonal skills. Self-motivated and a good team player.
- Demonstrated ability to work both as an individual contributor and in a team environment.
- Good Experience in Coordinating and involving different teams for fixing the Production issues
- Good working experience in ITSM tools such as remedy, service now and in-house similar tools.

TECHNICAL SKILLS

Languages	Java, SQL, Python, Shell Scripting, HTML
Operating Systems	UNIX, Macintosh, Windows
Servers	Weblogic 8.x/9.x/10.x/11g/12c, IIS Apache2.x
Databases	Microsoft sql server, Oracle
Tools	Jira, PAPA, Appwatch, Remedy, ITRS, Service now, Maximo, Autosys iXp, Eclipse, TOAD, Kite, Informatica, Eclips memory analyzer
Source code management (SCM) tools	Subversion, GIT
Build Tool	Ant, Maven, Eclipse
CI tools	Jenkins/Hudso , puppet, U -deploy

EXPERIENCE

Verizon, Frisco, TX

09/2018–09/2022

DevOps Engineer

- Deploy and monitor scalable infrastructure on AWS using EC2, S3, and EBS & configuration management.
- Automating scripts for build, deployment, maintenance and related tasks using Jenkins, Docker, Maven, Python and Bash as required.
- create entire AWS infra from scratch as required and help application team host there apps on cloud platform.
- Actively involved in maintain and building AWS infrastructure various resources IAM, VPC, Security Group, Auto Scaling, Cloud Watch, RDS, NACL, NAT, Firewall, Route 53, and Cloud Formation JSON Templates.
- Responsible for deployment of CI CD pipeline in Jenkins by migrating the freestyle project to the pipeline jobs, installed and configured the Maven build.
- Used Ansible to manage Web applications, Environments configuration Files, Users, Mount points and Packages
- Perform release and change management as required mainly to apply fix or to deploy enhancements.
- Responsible for integrating Kubernetes with Jenkins to perform the rolling deployments of the Docker images, version controlled the Docker files along with the source code, defined Pod definition and resource allocations to every pod.
- Actively involved in moving application from on premises to Azure cloud environment as required.
- Actively involved in configuring Elastic search, Log stash and Kibana (ELK) for log analytics, full-text search, application monitoring in integration with AWS Lambda and Cloud Watch.
- Implementing a Continuous Delivery framework using Jenkins and Chef in Windows and linux environment.
- Involved in implementing and scheduling AWS Lambda functions to trigger various AWS resources.

Environment: Windows sever 2008 & 2012, IIS 8, Apache Tomcat, Linux, WebLogic 12c, 2012 Microsoft SQL server SSIS & SSRS, Informatica, Tidal, Data stage, Oracle 11g, Jira, ServiceNow, New Relic monitoring tool, Eclipse, Eclipse memory analyzer, Azure, Jenkins, GIT, Java, Visual Studio, Oracle cloud, Microsoft Azure cloud

Synchrony Finance, Stamford, CT

02/2017–06/2018

DevOps / Windows Engineer

- Extensive requirement gathering with users to test each functionality of new application POC VS performance at each level i.e. application, web and data bases level. Providing in detailed feedback with recommendation involving hardware and software improvements at each level to make decision making task easy for Synchrony stake holders.
- This person will act as a first point of contact for any technical issue and expected to triage issues between different tiers (storage, OS, network, security, application, database, end-user etc.)
- Define SLA's for data delivery, IT response time and IT resolution time for different application in scope and for new application to be on boarded.
- Responsible to communicate, resolve and acknowledge applications issues within pre-defined Service Level Agreements (SLA).
- Involved in ITIL Management tasks such as Incident/Problem and Change Management activities in Synchrony internal applications
- Troubleshoot complex technical issues at any/all level of the application technology stack with minimal supervision.
- Performing in depth analysis of server logs, application logs, data base logs, heap dump and thread dumps as required and present root cause analysis.
- Research ETL flow and sql procedures to resolve issues related to bad data, duplicate records, data conversation, in comparable data and truncation errors.
- Work with development/testing, deployment and project teams to ensure continuous operation of build and test systems.
- Perform unit testing of deployed Java, .Net and SQL code in lower environments; analyze its impact on application (performance, process and functionality), make changes available to users, help user understand new features, test end to end application get sign -off before making changes to Prod and SIT environments.
- Actively involved in infrastructure improvements at both software and hardware level. This includes involving with Windows server teams for patching activities, working on to improve hardware RAM, CPU, disk memory.
- Involve with DBA, storage and windows team to remediate server and application vulnerabilities.
- Actively involved in on boarding more than 50 server to HP monitoring tool, which would provide server alerts for hype in memory, disk usage, CPU, sq. job failures, addition of new users, service status and IIS status. This involves working with SQL and PowerShell developers to meet requirements.
- Responsible for proving different level of AD group access to user groups across all servers and apps. Creating new AD groups as required.
- Migrated data from AWS to GCP Developed Chef Recipes to configure, deploy and maintain software components of the existing infrastructure.
- Implementing a Continuous Delivery framework using Jenkins and Chef in Windows and linux environment.
- Developing scripts for build, deployment, maintenance and related tasks using Jenkins, Docker, Maven, Python and Bash.
- Deployed Docker Engines in Virtualized Platforms for containerization of multiple applications.

- Installed Chef in and created POC for using chef as configuration management tools and orchestration. Automate infrastructure creation, deployment and recovery using Ansible/Salt, Docker, Terraform & Jenkins
- Conduct daily stand up meeting across team both onshore and offshore.
- Effectively resolve hurdles in on going issues if any in team.
- Create and manage dashboard reports for management review.
- Responsible for creating weekly, monthly status reports and metrics reports.
- Preparing comprehensive overviews of portfolio performance.
- Analyze data and create information in the form of reports (ad hoc, standardized) to provide proactive and preventative support models across the Program.
- Assist in the identification, development, and evolution of KPIs.
- Actively assign task to team members and manage any resource outage due to unexpected emergencies.
- Plans, schedules, and implements programs of application management designed to provide management information in a responsive and efficient manner

Environment: Windows sever 2008 & 2012, IIS 8, Apache Tomcat servers, Microsoft sql server (Sql server Integration and reporting services), Microsoft Azure, Jenkins, Chef, Office 365, Angular js, Oracle, Jira, ServiceNow, ITRS, Visual cron, Eclipse, Azure ,Eclipse memory analyzer, Jenkins, Visual Studio, Nexus.

Comcast, West Chester, PA

02/2016–02/2017

Production \Middleware Support Engineer

- Provided support for **WebLogic/Java** based applications primarily running with **Oracle11g/12c** on UNIX based Operating systems (Solaris 10, Redhat Linux)
- Migration of data, users and their orders for web-based order management enterprise metro Ethernet application.
- First point of contact for business queries and data analysis.
- Interacting with middle ware team on daily basic on server and UI health and fixing issues as required.
- Creating severity ticket and providing proactive update to both business users and management.
- Responsible for working on Incidents, Service requests, Installs, Deployments, Production support on a weekly rotation basis, coordinating server patching, Notifying partners for any planned/unplanned service outages
- Running bridge calls for troubleshooting and root cause analysis.
- Monitoring application performance using Wily Intrascop. Setting up the Intrascop to alert for various metrics (CPU, heap, threads).
- Involved in setting up continuous integration and formal builds using Jenkins with Maven and Tomcat repository.
- Experience with Oracle WebLogic, Sql, UNIX Shell scripting, SVN or other source control system and multi-threaded/multi-process application.
- Active involvement in monitoring the server performance, network traffic to reduce performance bottleneck.
- Analyzing thread dump and heap dump for Weblogic application server.
- Installed WebLogic on non-production servers and setup application as needed.
- Providing root cause analysis by analyzing thread, heap dump and applications logs. Work actively with development team to provide time line and fix of ongoing issues and enhancements.
- Work with development/testing, deployment, systems/infrastructure and project teams to ensure continuous operation of build and test systems.

- Managed, maintained and created data loads for upstream and downstream systems for different applications using **Autosys Jobs**
- First point of contact for sales force and other upstream, downstream system. Which involved analysis of data and design differences, proving work arounds and working with development and middle ware team to reduce difference in systems and provide continuous availability.
- Testing data availability using SOAPUI and making necessary changes in data base and raising code fix to development as needed.
- Responsible **production releases** that involved deployment activities from multiple infrastructure teams like Middleware, Database, UNIX and Network.
- Involved in supporting testing team and creating UAT, non-prod testing environment depending on requirement.
- Responsible for post release validations, support and pre-release testing as required.
- Involved in Production support activities and handled user queries on **Vending** data to consumers using **TIBCO** and resolved issues related to it by working with Infrastructure teams.
- Primary point of contact for ITIL Management tasks such as **Incident/Problem and Change Management** activities.
- Communicate post release, pre-release, patch and outage activities to end users, business and application owners in timely manner.
- Closely worked with network team on TCP/IP dump analysis.

Environment: SQL Developer, Java, WebLogic Server 10.X, Apache 2.X, MS Excel, Visual Studio 2005, Autosys IXPXML, Oracle 11g, UNIX, Jira, Remedy.

Bank of America, Chicago, IL

02/2013 –02/2016

Production Support Engineer/Analyst

- Main duties of the candidate are to Analyze, maintain, develop and improve BOA in house ETL ledger and sub ledger applications. As these are in-house applications everything needs to be done manually requiring manual work around by writing PLSQL queries and store procedures, executing and modified programmers as needed in ASP.NET/C#, HTML, CSS, VBScript, and XML.
- First point of contact for business queries and data analysis. (Business facing).
- Assist Finance analysts in their BAU activities to ensure company balance sheet is accurately produced (Business facing)
- Assist in Infrastructure Administrators to keep infrastructure up to date with hardware and software components to avoid performance to users and maintain secure and healthy systems (Core)
- Determine operational objectives of business requirements working with stakeholders and evaluating requests to propose recommended solutions. (All)
- Plans, schedules, and implements programs of application management designed to provide management information in a responsive and efficient manner
- Refining the logical design so that it can be translated into a specific data model.
- Evaluates complex business requirements; performs process analysis of customer activities to determine alternative business solutions or process improvement opportunities.
- Monitoring and alerting of critical trading system environments includes deploying schedulers in autosys, database refresh, securing windows and UNIX servers
- Worked with team on IIS 7.0 servers for setting up FTP configuration.

- Implement business solutions or process improvement opportunities in lower environment then coordinating with end users and business stake holder for satisfied testing and implementing SQL procedures and changes in Production
- Deployment of objects, release implementation and post-release testing (Core)
- Development of tools and driving efficiency/stability improvements (All)
- Enforcement of change management policy to minimize business interruptions (All).
- Performing health checks on Windows and UNIX platforms to manage space and data issues.
- Controlling access permissions and privileges of UNIX servers, windows platform and database related to applications.
- Assist and train the applications to Middle Office business users to utilize the SubLedger applications and correct the day to day balances (business facing)
- User Access management by following Sarbanes-Oxley Act of 2002 also known as SOX (All)
- Use source control to manage database schema and static data across multiple environments, servers, and databases.
- Establishing the needs of users and monitoring user access and security considering both back-end organization of data and front-end accessibility for end-users in ASP.NET and Python.
- Involved in **ITIL** Management tasks such as **Incident/Problem and Change Management** activities in Bank of America internal applications
- Trouble shooting perform issues of ASP.NET and Python application in order avoid delays, outage and to maintain SLAS.
- Autosys jobs which are responsible for batch processing are monitored through Website, which we maintain in house.
- Ensuring that storage and archiving procedures are functioning correctly application wide globally.
- Ensure that batch jobs are performing there day to day activity correctly without any issues on server and database which includes pulling data from external Database and tables and writing into internal data bases as required with business complains.
- Accurate tracking of support effort to enable effective management reporting
- Performing Disaster recovery management and Completed Disaster recovery test for each application.

Environment: SQL Server 2005/2009, DTS, SSIS, SSRS, Informatica , Erwin Data Modeler, Java, T-SQL, MS, Java, Access, MS Excel, Access Data Analyzer, Visual Studio 2005, C#, Oracle 11g, Autosys IXP,SSAS,UNIX,VB 6.0,IIS 7.0 servers

GRADUATE LEVEL COURSE DETAILS:

- **SQL Server Business Intelligence Program:** **Sep 2012 – Dec 2012**
 - Include analysis services with real-time analytics, integration services, data mining, reporting services, Key Performance Indicators, cube and dimensions development, proactive caching,

SQL Server Management Studio, Business Intelligence Development Studio, and integration with the Microsoft Office system.

- **Database Technologies:**
 - Creating tables; writing SQL queries as per the requirement to solve given problems and generating reports; finding out under which level of normalization data base schema is in and normalizing it to further levels as per the requirement.
 - Converting a real-time system into computer-based system from scratch using ER diagrams and then creating a data base schema from it; normalizing the schema as per the requirements.
- **System Design, Implementation and Maintenance**
 - Converting the paper-based system of a Mobile store into computer based which included converting inventory management, financial and sales management system. This process contained of drawing a context diagram of the entire system then modeling it into first and second level of data flow diagram. Creating a data base design with tables based on this. Developing menus bars and buttons, forms using visual studio 2010 using C#. Connecting the tables in the back-end data base to the front end of visual studio development and demonstrating the entire system.
- **Information Security management:**
 - Installing and implementing various computer security tools. Finding out the vulnerabilities in the programming code. Understanding the value of granting permissions to a user. Cases studies of the worst computer security breaches in the history.
 - Demonstrating what could be the cons of a bad security system by implementing possible attack into a company's network.
- **Enterprise System:**
 - History of ERP system and its future. Assignments on Microsoft Dynamics AX 2009 and People Soft 7.5.

EDUCATIONAL BACKGROUND:

Master's in computers and Information Systems, DePaul University, Chicago, IL, USA -2012

Bachelor of Technology in IT Engineering, JNTU, HYDERABAD, INDIA - 2010
